

Disparate User Data Unified to Provide Consolidated Dashboard to Simplify, Measure and Justify Large HR Investment.

JOB BOARD AGGREGATOR

Washington DC Metro Area

BACKGROUND

Our client, a top 10 defense contractor, had nearly 200 recruiters using 12 different sourcing platforms to find candidates for their ≈2,500 open jobs. Each platform provided our client with monthly usage statistics to better understand how their platform was being utilized, but there was no commonality between reports – the structure, formats, metrics and levels of detail were all different – even the format of the recruiter's names was different. Executives wanted accurate, timely and streamlined reports compiled per month and on a fiscal year basis but doing so took days of manual effort each month and was fraught with human error. Leadership had difficulty calculating a ROI for executive management on the \$1M invested annually in the various recruiting platforms because it was too difficult to get an integrated view of the system landscape accurately and repeatably.

CHALLENGES

- ▶ “Entity Resolution” was the primary challenge of this project
- ▶ Each recruiter was represented differently in vendor reports, preventing a systematic linkage across all reports
- ▶ Platform vendors were unable/unwilling to modify reports in a way that might enable a systematic linkage (such as including email address, Employee ID, etc.)
- ▶ Desired KPI's/usage metrics were computed differently across vendor files
- ▶ Each vendor had different billing formats which required data normalization before ROI could be computed
- ▶ As company turnover naturally occurred, new recruiters would need to be added and old users removed; this pattern would continue indefinitely

SOLUTIONS

- ▶ Resolved the entity resolution problem using creative and customized analytical techniques
- ▶ Developed a process and system to link uniquely link user entities for long-term automation
- ▶ Created a one-stop-shop tool that automatically queried, linked and aggregated monthly data
- ▶ Developed a self-service dashboard for management and leadership to visually render usage analytics across vendor platform, internal organizational unit and recruiting manager

VALUE

- ▶ Provided executives with actionable business intelligence so that they could determine effectiveness of recruiting via quantifiable and measurable data.
- ▶ Automated the error-fraught manual aggregation of monthly reports.
- ▶ Improved the existing business process with a new process that created clean, repeatable, systematically usable data.

Adaptalytics' data scientists resolved the entity resolution problem and designed a process and system to automate the linkage of records and deliver accurate, timely reports to executives to first calculate and then maximize ROI and shareholder value.
